

Planting/Caring for our Direct Sow (seed kit) Plants :

Carrots:

1. Carrot seeds can be planted directly in the ground outside between April 11 - May 15.
2. Poke holes in the soil 3 inches apart and 1/4 to 1/2 an inch deep.
3. Plant 2-3 seeds into each hole, to make sure that at least one of them will germinate
4. Cover the seeds with soil and gently pat down the surface.
5. Water the soil generously until it has soaked down at least several inches below the surface.
6. Label your rows.
7. Make sure to check on the garden each day to ensure the soil doesn't dry out before the seeds germinate. If the soil is looking dry, add water.
8. Carrots should show some signs of growth within 14-21 days in ideal conditions.

Radishes:

1. Radish seeds can be planted directly in the ground outside, between April 8 - June 6.
2. Poke holes in the soil 1 inch apart and 1/4 to 1/2 inches deep.
3. You can plant 2-3 seeds into the same hole, to make sure that at least one of them will germinate.
4. Cover the seeds with soil and gently pat down the surface.
5. Water the soil generously until it has soaked down at least several inches below the surface.
6. Label your rows.
7. Make sure to check back on the garden each day to ensure the soil doesn't dry out before the seeds germinate. If the soil is looking dry, add water.
8. Radishes should show some sign of growth within 5-10 days in ideal conditions.

Beans:

1. Bean seeds can be planted directly in the ground outside, between May 23 - June 20.
2. Plant the seeds 1 inch deep, spaced 3 - 4 inches apart.
3. Cover the seeds with soil and gently pat down the surface.
4. Water the soil generously until it has soaked down at least several inches below the surface.
5. Label your rows.
6. Make sure to check back on the garden each day to ensure the soil doesn't dry out before the seeds germinate. If the soil is looking dry, add water.
7. Radishes should show some sign of growth within 6-10 days in ideal conditions.
